

WEAK BONES?

THE JOHNSON CENTER IS RECRUITING
RESEARCH PATIENTS FOR A NEW STUDY

THE BARE BONES OF IT:

Researchers at the Johnson Center are looking for healthy boys, ages 4-8 years, to participate in a research study that is related to bone density and autism.

WHAT IS BEING STUDIED?

Bone mineral density status for healthy boys and boys diagnosed with an autism spectrum disorder (ASD).

WHAT IS THE PURPOSE?

To conduct a study investigating bone density in healthy boys and boys diagnosed with an ASD to see if it relates to nutritional status, GI symptoms, and growth measurements.

WHAT IS REQUIRED?

- Giving a small blood sample.
- Answering a short questionnaire.
- Undergoing a bone density scan and an x-ray.
- Height, weight, and muscle measurements.

Compensation is available for participation.
